

Project Setup

The Project Setup describes our procedure for the implementation of the project and the implementation of the software. It provides an overview of the relevant work stages and key factors for a successful project:

- Definition of the bank portfolio
 - Definition of the interfaces and the processing
 - Elaboration of technical requirements
 - Discuss and define the existing key worlds (e.g. business types)
 - Chart of accounts and booking rules
 - Existing IT systems and their tasks and data
 - Teams and methodologies for the System Integration Test (SIT) and the User Acceptance Test (UAT)
